

# Aluminum 7075 Alloy Pipes

Chhaged Steel & Alloys are aggressively venturing into exporting of our products to various countries. **7075 Aluminum Pipe** is one of the many aluminum alloys that are used in different industries and applications. It is called an aircraft grade aluminum alloy pipe. The alloy has zinc in it and it is extremely stronger. There are different use cases. Pure aluminum is light weight and corrosion resistant to most environments but it is reactive with moisture. The addition of alloying material makes the aluminum pipes to possess different qualities. The **7075 Aluminum Seamless Pipe** is the most uses of the 7075 material is in the aircraft industry, the pipes have to be precise in dimensions. It is drawn from the raw material and it allows the pipes to be precise in dimensions. The seamless pipes offer the precision in dimension. The **Aluminum 7075 Box Pipe** used in hydraulic systems where lifting operations are done. It is used with applications where the strength is the most prioritized requirement.

The **AL Alloy 7075 Welded Pipe** is electric resistance welded and it could be anodized easily. It is stronger and it could be welded with other components on an aircraft. The anodizing helps that pipes to be colored accordingly for decoration and at the same time to maintain an anticorrosive oxide layer. The Aluminum Alloy 7075 Round Pipe is one of the most used shapes of the pipes in aircraft industry. Due to the strength requirements, the AL Alloy 7075 Alloy Square Pipes are also commonly used in the aerospace industry.
