

ASTM A333 Carbon Steel Gr 1 Pipe

Chhaged Steel & Alloys are aggressively venturing into exporting of our products to various countries. **ASTM A333 grade 1** is built from carbon-based alloy for low temperature service. This chemical composition of the A333 carbon steel pipe includes phosphorus, manganese and Sulphur. Tensile strength and yield strength for **A333 gr b pipe** is variable among its grades, for example, the tensile strength is 380 MPa and yield strength is 205 MPa for grade 1 and the tensile strength is 450 MPa and the yield strength is 240 MPa for grade 3. While the tensile strength is 415 MPa and yield strength is 240 MPa for **ASTM A333 grade 1 pipe** schedule. The pipes made of SA 333 grade 1 material are meant for low temperature applications, and A333 grade 1 pipe are available in welded, ERW, CDW, fabricated or seamless type. Producing welded pipes, it's not required of adding the filler metals during the operation, as these carbon steel A333 grade 1 pipes are surface treated.

Surface treatments include a finishing by Oil-dip or coating, Phosphating, Varnish, Passivation. It can be also anodized or finished polish. This treatment gives the surface of the **A333 grade 1 seamless pipe** is a flawless appearance and smooth. ASTM A333 grade 1 pipe are conventionally formed, cold-worked and welded. The A333 grade 1 pipe can be hot worked, but they cannot be hot worked below 1500 degrees F. The **ASTM A333 grade 1 pipe** equivalent pipe are used in the transportation of Chemical, Water and Gas and **SA333 gr1 pipe** are application of building or construction work, where it can be used to deliver concrete pumps.
