

# Titanium Pipes

Chhajed Steel & Alloys are aggressively venturing into exporting of our products to various countries. **Titanium Pipe** is a metal pipe made up of Ti alloy. There are commercially pure Ti materials that contain 99% pure titanium and there are others that include other elements to make up the alloy. The **Pure Ti Seamless Pipe** is highly corrosion resistant and is stronger. It is used in applications where chemical reactions are expected. The material is costly and therefore only used in applications where the other metals could not be used. The commercially pure CP Ti Welded Pipe is produced by hot rolling and welding. These are stronger than the other pipes. They can last longer and they allow welding with minimal effort.

The strength and high temperature resistant of the material makes it be used as **Ti Exhaust Pipes** under high temperatures. There are different grades of ti alloys based on the addition of other materials. Mostly, these are used with structural applications. The **CP Ti Round Pipes** are the most used and it is used in a host of applications. The extraordinary corrosion resistance and the lightweight nature of the material allow it to be used in precision accessories. Most uses are in the military sector because of the high cost but there are applications like the Pure Ti Exhaust Pipes which are not always found in the military.

**Titanium Pipes, Titanium Welded Rectangular Pipes Manufacturers, Titanium Seamless Pipe Suppliers, Titanium Marine Exhaust Pipe Exporters Titanium Polished Decorative Pipe Stockist.**

**Titanium Square Pipe in India, Titanium Pipes Manufacturers in India, Titanium Rectangular Pipe Suppliers in India, Titanium Hydraulic Pipe Exporters in India, Titanium ERW Pipes Stockist in India.**
